NASA Applied Sciences Program

Discovering and demonstrating innovative and practical uses of Earth observations in organizations' policy, business, and management decisions.

<http://AppliedSciences.NASA.gov>

Applications

Prove-out, develop, and transition applications ideas for sustained uses of Earth obs. in decision making.

Capacity Building

Build skills and capabilities in US and developing countries to access Earth observations to benefit society.

Mission Planning

Identify applications early in mission lifecycle and integrate end-user needs in mission design and development.

Applications Areas

Areas of Applications Emphasis

**Health &
Air Quality**

**Water
Resources**

**Ecological
Forecasting**

Disasters

**Agriculture /
Food Security**

Support opportunities in additional areas

Energy

**Urban
Development**

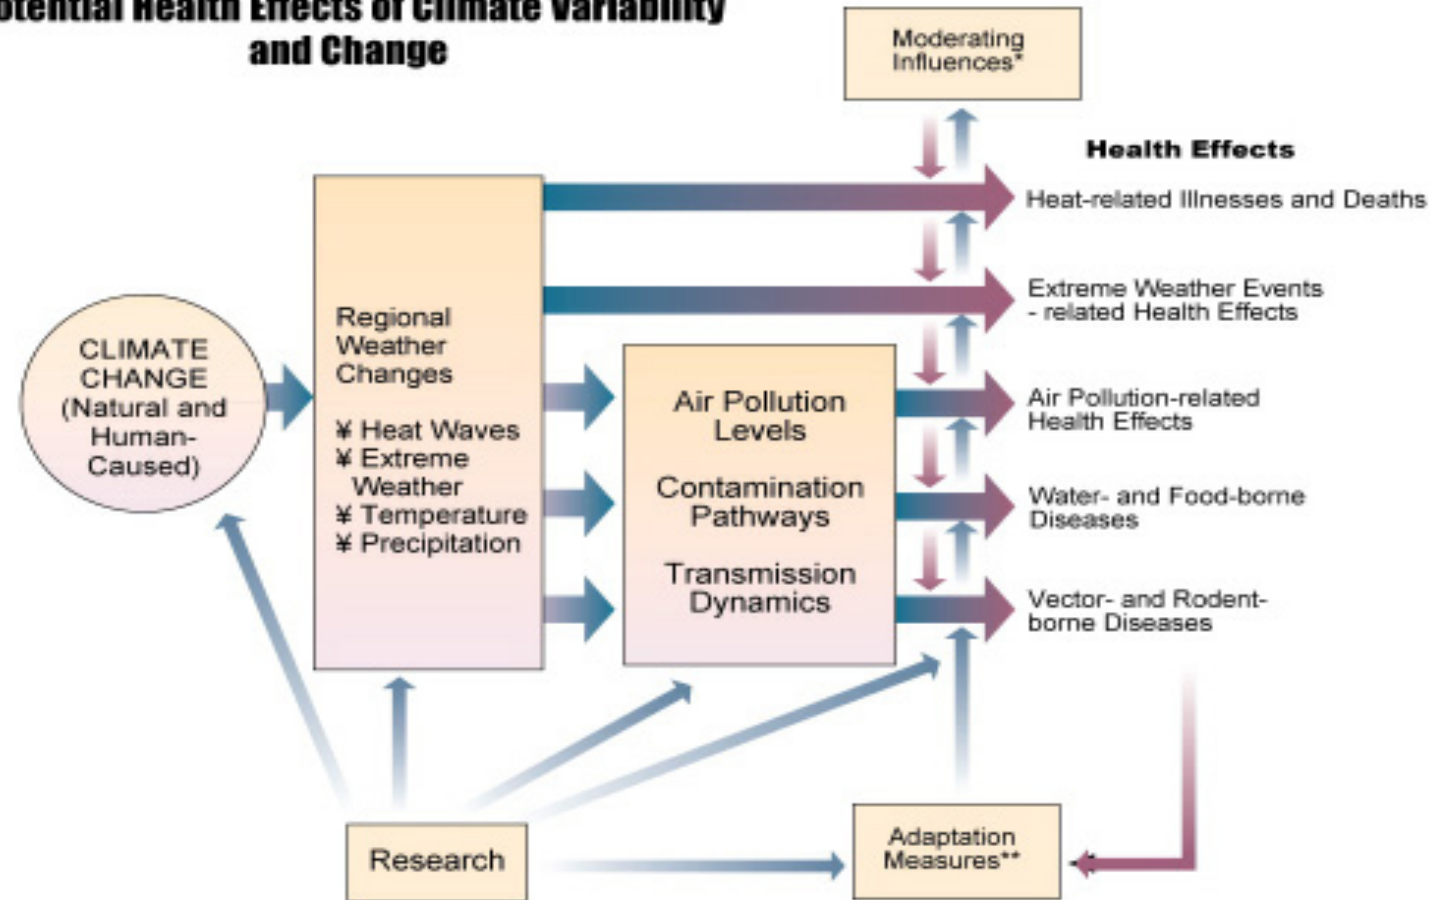

**Transportation /

Why Health & Air Quality?

Potential Health Effects of Climate Variability and Change

Source: GEO,
2003

Global Examples of Emerging and Re-Emerging Infectious Diseases

AIR POLLUTION – THE SILENT KILLER

Air pollution is a major environmental risk to health. By reducing air pollution levels, countries can reduce:

Stroke

Heart disease

Lung cancer, and both chronic and acute respiratory diseases, including asthma

REGIONAL ESTIMATES ACCORDING TO WHO REGIONAL GROUPINGS:

Over 2 million
in South-East Asia Region

Over 2 million
in Western Pacific Region

Nearly 1 million
in Africa Region

About 500 000
deaths in Eastern Mediterranean Region

About 500 000
deaths in European Region

More than 300 000
in the Region of the Americas

CLEAN AIR FOR HEALTH

#AirPollution

World Health Organization

Health & Air Quality

Objectives:

- NASA's Health & Air Quality Applications Area supports the use of Earth observations in air quality management and public health, particularly regarding **infectious disease and environmental health** issues.
- The area addresses issues of toxic and pathogenic exposure and health-related hazards and their effects for risk characterization and mitigation.
- The area promotes uses of Earth observing data and models regarding **implementation of air quality standards, policy, and regulations** for economic and human welfare.
- The Health & Air Quality Applications Area also addresses **effects of climate change on public health and air quality** to support managers and policy makers in their planning and preparations.

Major Partners include International (e.g., GEO, WHO, UNICEF, PAHO), Federal (e.g., CDC, EPA, NIH, NOAA), State (e.g., South Dakota, California, Texas), and Private sectors (AER, Inc.).

Improving Air Quality Maps with Satellite Data

PI: Phil Dickerson, EPA

GROUND-BASED + SATELLITE COVERAGE OF AIR QUALITY

Green = ground-based PM_{2.5}
Blue = AirNow Satellite-based
White = no coverage

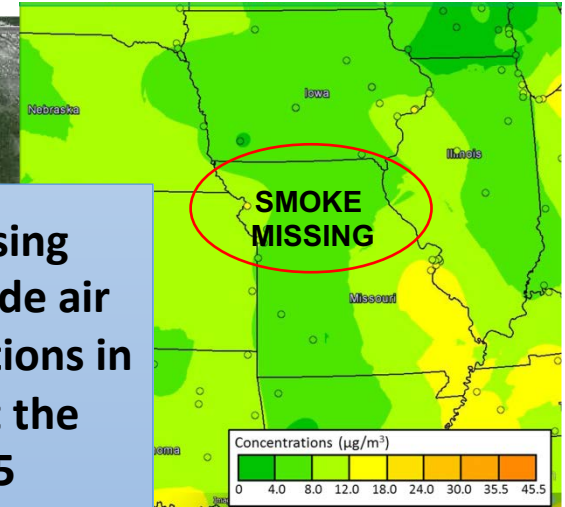

<https://asdp.airnowtech.org/about.php>

Northern Missouri fires - Sept. 4, 2013

MODIS image

PM_{2.5} FROM GROUND BASED DATA

GROUND+SATELLITE DATA

A study was conducted to assess the cost savings of using satellite data instead of installing new monitors to provide air quality information for public health decisions to populations in currently unmonitored locations. The study found that the addition of satellite data would provide daily PM_{2.5} information to 82 percent of the people living in currently unmonitored locations (approximately 15 million people); the study estimated that the capability represents a value of about \$26 million.

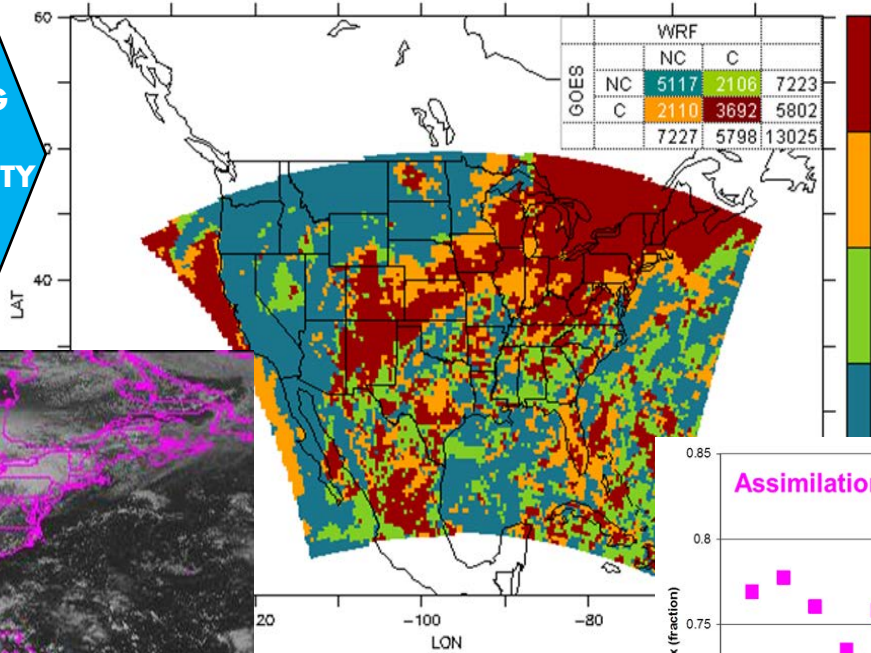

"This is the best tool I have seen so far that integrates satellite data with information from ground monitors."

Cassie McMahon, Minnesota Pollution Control Agency

Incorporating Space-borne Measurements to Improve Air Quality Decision Support Systems for Texas

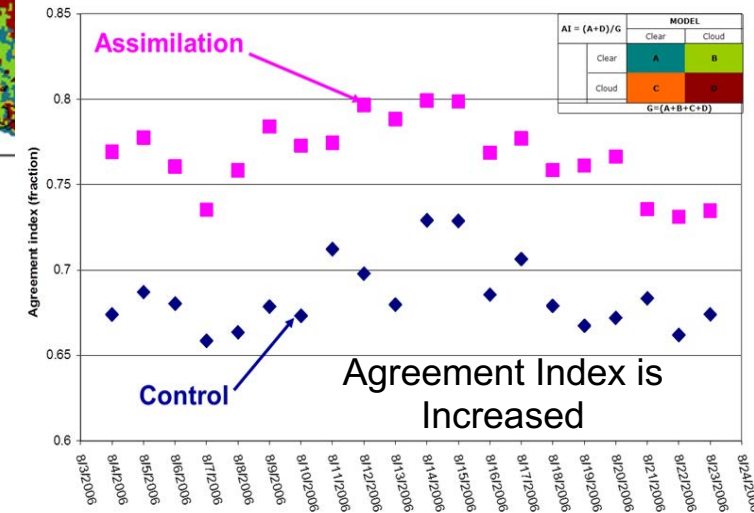

PI: Arastoo Pour Biazar, UAH

**CLOUD LOCATIONS & TIMING
FROM SATELLITE
INGESTED INTO THE AIR QUALITY
MODEL USED TO PLAN
ACCEPTABLE EMISSIONS**

**IMPROVED AIR QUALITY
PLANNING AND
REGULATORY DECISIONS**

- The temporal and spatial location of clouds have a large impact on the projected air quality given a set of emissions. This tool is designed to provide accurate cloud information.
- Texas Commission for Environmental Quality (TCEQ) used this tool in their latest State Implementation Plans (SIPs)
- The State of Texas contributed an additional \$500k in funding to NASA Applied Sciences.

Smoke Health Impact Assessment (HIA) Forecaster

PI: Jeff Pierce (Colorado State University)

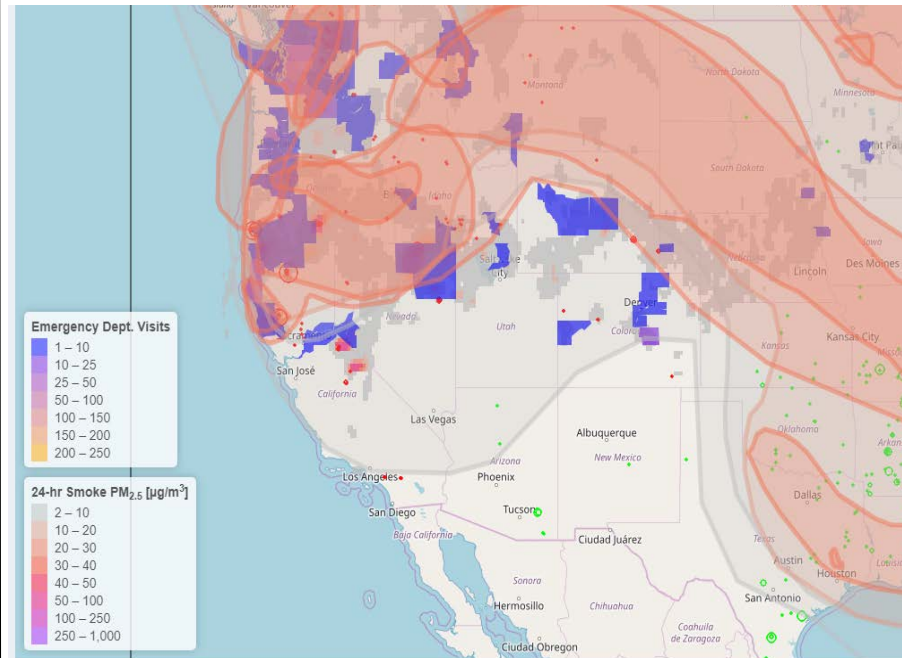

Background Research

- Used NASA MODIS Aerosol Optical Depth (AOD), surface measurements, and model concentrations to estimate smoke exposure for past fires

- Combined with health data to determine associated health effects of smoke exposure

Product: https://rgan.atmos.colostate.edu/smoke_forecaster/

- Apply those health associations to smoke forecasts to forecast health impacts of smoke exposure
- Allows communities and health providers to understand potential health risks and prepare for burden on health resources during smoke events

Ongoing Product Development

- Communications researchers at CSU are testing the usefulness and messaging of this product with the Colorado Department of Public Health and the Environment (CDPHE)

Health and Air Quality Applied Sciences Team (HAQAST)

Connecting NASA Data and Tools with Health and Air Quality Stakeholders

NASA Aura OMI Shows Air Quality Improved

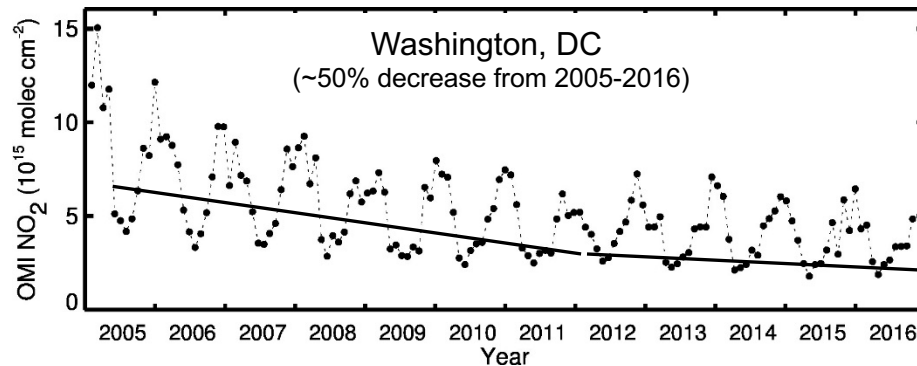

- Nitrogen dioxide (NO_2) is a pollutant that is unhealthy to breathe and contributes to the formation of unhealthy levels of surface ozone pollution. It is primarily emitted from tailpipes and smokestacks.

- Aura Ozone Monitoring Instrument (OMI)

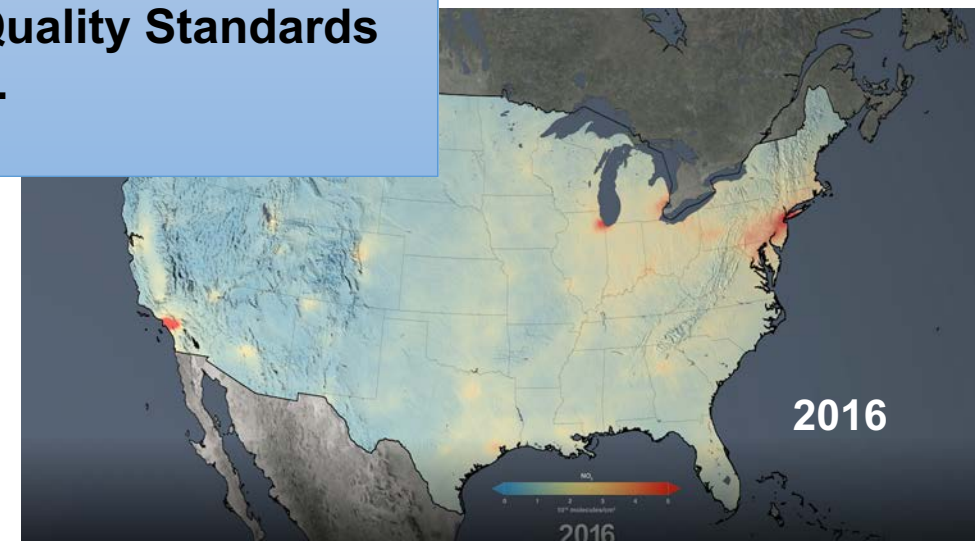

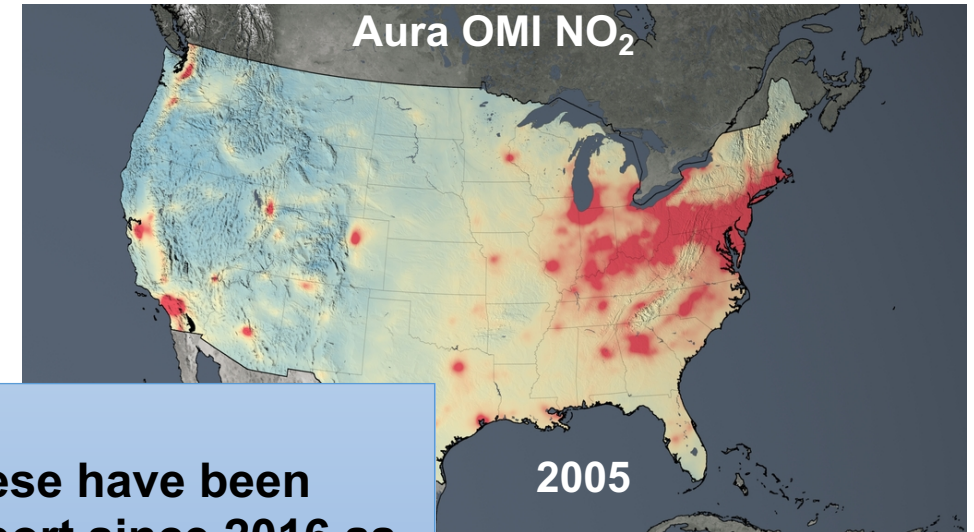

NO_2 data show
of the U.S. from

Facilitating the Integration and Adoption of Satellite Products for Decision Support during Wildland Fire Smoke Episodes:

Susan O'Neill (USFS)

NASA remotely-sensed products help inform the public about smoke impacts from wildfires.

When smoke from wildfires blankets a region, people want to know: When will the smoke clear? Can my child play outside? Do we cancel the football game? NASA science is being used to support these important decisions affecting our daily life, health and safety.

How: Including remotely-sensed data/products in tools/information used by smoke forecasters deployed with Incident Management Teams and Health/AQ Agencies.

- Smoke Outlooks (One-page smoke forecasts):
<https://wildlandfiresmoke.net/outlooks/>
- Smoke Forecasting System Improvements (MODIS, VIIRS, GOES, CALIPSO, MISR, TROPOMI)
- Web-tool: GOES-16 fire detection viewer, custom time profile generator and smoke modeling

Published Tue Aug 27 2019, 16:12:13 (+00)

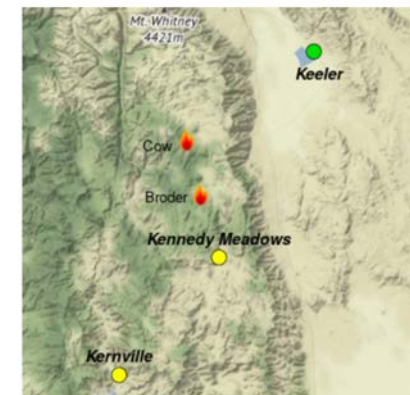

Smoke Outlook for 8/27 - 8/28
Eastern Sierra : Broder and Cow Fires
Issued at: 2019-08-27 09:11 PDT

Fire
Broder: The Broder fire is approximately 235 acres with a growth of 33 acres and 10% contained. Yesterday crews received a few spots fires due to stronger winds out of the East with gusts up to 25 mph, but they were quickly suppressed. Today with stronger winds predicted, crews will continue to hold and secure control lines with no strategic handfiring.
Cow: The Cow fire is approximately 771 acres with a growth of 171 acres and 15% contained.
<https://inciweb.nwcg.gov/incident/6529/>

Smoke
Yesterday Kennedy Meadows saw Moderate conditions overnight and into the morning. As the inversion lifted, air quality improved. Expect to see similar conditions today.

Webcams
Webcam website listed below. The best webcams for Broder Fire is Porterville Air Base NE(camera moved from that location, name may change) and Bald Mountain Webcam #3. The best webcams for Cow Fire is Bald Mountain Webcam #5 and Bald Mountain Webcam #2.

Daily AQI Forecast* for Aug 27, 2019

| Station | Yesterday hourly | | | Mon 8/26 | Comment for Today -- Tue, Aug 27 | Forecast* | |
|-----------------|------------------|------|----|----------|--|-----------|----------|
| | 6a | noon | 6p | | | Tue 8/27 | Wed 8/28 |
| Kernville | | | | | Good conditions in the morning with Moderate conditions in the afternoon | | |
| Kennedy Meadows | | | | | Moderate conditions with Good conditions in the afternoon. | | |
| Keeler | | | | | Little to no effect from these fires | | |

Issued 2019-08-27 09:11 PDT by Ariane Sarzotti, Air Resource Advisor, ariane_sarzotti@nps.gov

| Air Quality Index (AQI) | Actions to Protect Yourself |
|-------------------------|---|
| Good | None |
| Moderate | Unusually sensitive individuals should consider limiting prolonged or heavy exertion. |
| USG | People within Sensitive Groups* should reduce prolonged or heavy outdoor exertion. |
| Unhealthy | People within Sensitive Groups* should avoid all physical outdoor activity. |
| Very Unhealthy | Everyone should avoid prolonged or heavy exertion. |
| Hazardous | Everyone should avoid any outdoor activity. |

- HAQAST members Bryan Duncan and Anne Thompson (GSFC) are partnering with the Bureau of Ocean Energy Management (BOEM) to evaluate the current capabilities of satellite data for air quality monitoring and emissions validation over the Gulf of Mexico.
- This project is a feasibility study to identify NASA resources for BOEM to aid in monitoring the impact of offshore pollution on inland communities. BOEM is co-funding this study.
- Two main project parts:
 - 1) Evaluation of NASA datasets for monitoring offshore air pollutants.
 - 2) Field campaign coordinated to measure surface to validate the satellite data (Summer 2019).

HAQAST Builds Portal to Promote NASA Tools for Stakeholders

- HAQAST has redesigned the website (www.haqast.org) to feature NASA tools and data.
- Tools section designed in consultation with ARSET (<http://arset.gsfc.nasa.gov>).
- Developed how-tos for two of the most useful tools for HAQAST stakeholders: Worldview and Giovanni; includes short videos.
- Website is live now!

Connecting NASA Data and Tools With Health and Air Quality Stakeholders

TWTITTER.COM/NASA_HAQAST

What is next for HAQAST?

- NASA is re-competing HAQAST for an additional four year term through a NASA ROSES 2020 solicitation (NNH20ZDA001N-HAQ / ROSES 2020 Element A.38).
- Notices of Intent requested by April 17, 2020.
- Proposals due on May 29, 2020.
- Estimated 12-15 awards with a budget of \$2M per year (does not include Tiger Team funds).
- Awards to begin in October 2020.
- For additional details visit:

Applied Remote Sensing Training Program (ARSET)

POC: Ana. I. Prados, NASA-GSFC

Objectives

- Provide end-users with **professional technical workshops**
- Build long-term partnerships with communities and institutions in the public and private sectors.

Online and hands-on courses

- **Who:** policy makers, environmental managers, modelers and other professionals in the public and private sectors.
Where: U.S and internationally
- **When:** throughout the year. Check websites.
- Do NOT require prior remote- sensing background.
- Presentations and hands-on guided computer exercises on how to access, interpret and use NASA satellite images for decision-support.

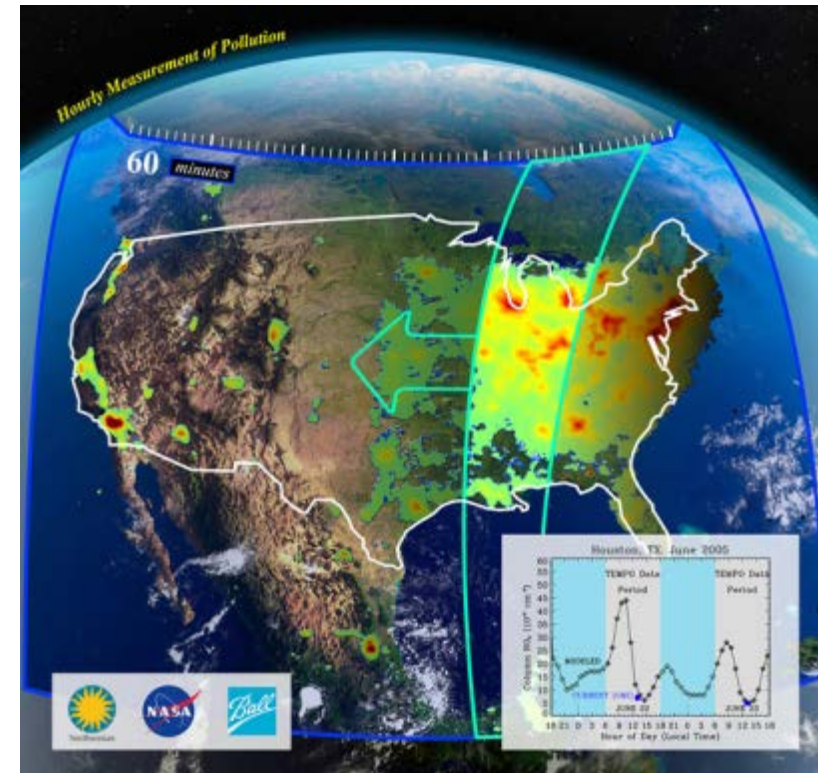

NASA ARSET Training for California Air Resources Board, Sacramento, CA

Earth Venture Instrument-1:

Tropospheric Emissions: Monitoring of Pollution (TEMPO)

“Monitoring the air we breathe, hour by hour”

- **TEMPO is a pathfinder to using hosted commercial payloads from GEO**
- Tropospheric pollution observations from Geostationary Orbit
 - Ozone, NO₂, and CH₂O.
- Forms a global Air Quality constellation in GEO with Copernicus Sentinel 4 and Korean GEMS.
- EPA and NOAA are part of the science team.
- Instrument delivered in 2018; Launch 2022

Earth Venture Instrument-3: Multi-Angle Imager for Aerosols (MAIA)

- *MAIA represents the first time NASA has partnered with epidemiologists and health organizations to use space-based data to study human health and improve lives.*
- **Objective:** Assess linkages between different airborne particulate matter (PM) types and adverse birth outcomes, cardiovascular and respiratory disease, and premature deaths.
- **Instrument:** Multi-angle spectropolarimetric imaging instrument for operation in a sun-synchronous Earth orbit to measure the particle types, sizes, concentrations, and geolocation of atmospheric aerosols.
- Launch expected in 2022.

2017-2027 Decadal Survey for Earth Science and Applications from Space

- Science and Applications Priorities for Air Quality:
 - Determine the effects of key boundary layer (BL) processes on air quality forecasts;
 - Reducing uncertainty of vertically resolved tropospheric fields of speciated PM, O₃, and NO₂;
 - Characterize long-term trends and variations in global, vertically resolved speciated PM, O₃, and NO₂;
 - Characterize tropospheric O₃ variations and impacts on surface air quality and background levels.
- Boundary layer processes are critical to air quality forecasts, as this is where people live and breathe.
- The upcoming launch of TEMPO and its Korean (GEMS) and European (Copernicus-Sentinel-4) constellation partners will allow unprecedented high temporal and spatial resolution measurements of tropospheric ozone, aerosols, and their precursors, to create a revolutionary dataset that will help address these priorities.

2017-2027 Decadal Survey for Earth Science and Applications from Space

Primary Air Quality Designated Observable: Aerosol Cloud Convection and Precipitation (A-CCP)

- NASA Applied Sciences is engaging the user community for feedback on potential A-CCP architectures and their corresponding geophysical variables, starting with most experienced users and then gradually including less experienced users.
- In July 2019, the U. of Maryland hosted a Weather Forecasting and Air Quality workshop that brought together operational representatives from US agencies (NOAA, NRL, AFWA, EPA) and international partners (JMA, ECMWF, UK Met Office, EC) to discuss the potential for A-CCP geophysical variables to be assimilated into their operational modeling frameworks.
